
ABSTRACT

Resourceful and motivated with a passion for software and web development. Experienced in building robust and user-friendly web applications from scratch using UI and API frameworks. Experienced in contributing to large-scale projects with a focus on efficiency and user experience. Able to adapt, collaborate and communicate within diverse team environments. Interested in contributing technical and problem-solving skills to company's software product or service.

WORK EXPERIENCE

- **Financial Risk Group (GRG Consulting Sdn Bhd)** June 2025 – Present
Assistant Software Developer Kuala Lumpur, Malaysia
 - Develop and maintain the **Visualization of Risk (VOR)** platform — a financial risk analytics product built with Angular, Django REST Framework, and Go — shipping bug fixes, UI features, and platform refactors across a multi-service codebase.
 - Led the **Angular 17 → 21 upgrade** of the VOR client, including migration to standalone components, frontend state management from RxJS-heavy to Angular Signals and Resource, Material Design 3 theming, and a Highcharts v11 → v12 upgrade with downstream charts and screen refactors.
 - Modernized frontend tooling: migrated unit testing from Karma/Jasmine to Vitest, replaced VOR's web code editor with CodeMirror for better featureset, and removed legacy dependencies.
 - Delivered major UI features including the Scenario Builder (bidirectional chart/table editing with atomic undo/redo and multi-sheet Excel export), the Structured Model Definition editor with a unified field reference architecture, and a rewritten Process Viewer with minimap, zoom, and customizable nodes and edges.
 - Resolved 40+ Jira tickets spanning the Angular frontend, Django REST API, and Go ETL CLI, including foreign-key constraint fixes, cross permission enforcement, and CLI refactors.
 - Prototyped **BAT-Agent**, an internal AI agent proof-of-concept (Strands Agents SDK, AWS Bedrock, React, Django, PostgreSQL) that automates onboarding of financial portfolio data through a multi-step agent workflow with a sandboxed code-generation step; deployed on AWS EC2 for stakeholder review.
 - Assisted with code reviews and automated testing workflows to ensure code quality and timely delivery.
- **Estee Lauder Malaysia Sdn Bhd** September 2024 – February 2025
Software Engineer Intern Kuala Lumpur, Malaysia
 - Contributed significantly to the development and delivery of the **Support Portal**, a critical internal web application streamlining data resend and data sync processes from the source database of a proprietary retail point-of-sale software system to various external downstream applications and services, to improve the operational efficiency for multiple Asia-Pacific affiliates of Estee Lauder Companies organization.
 - Developed over 15 interactive UI screens and components for the Support Portal using React.js, TypeScript & Material-UI, resulting in a user-friendly frontend interface for managing data resend and data sync requests.
 - Developed REST API endpoints using Spring Boot and Java following MVC pattern to support functionalities, including multi-level user authentication and registration, data resend and data sync services, history service table listings, admin account maintenance, user profile, and data visualization dashboard.

EDUCATION

- **Bachelor of Information Technology (Hons.) in Software Engineering** Sept 2021 - March 2025
Universiti Kuala Lumpur - Malaysian Institute of Information Technology Kuala Lumpur, Malaysia
 - CGPA: **3.78/4.00** — Foundation Year: **3.67/4.00** — SPM (High School): **3A+, 6A, 1B+**.

TECHNICAL SKILLS

Programming Languages: JavaScript (TypeScript), Python, HTML, CSS, Java, PHP, Go, Makefile, Bash

UI/Frontend: React.js (Vite, Next.js, React Router, shadcn/ui, Material-UI, Redux Toolkit, RTK Query, TanStack Query/Table, Framer Motion, Xyflow, Vitest); Angular (RxJS, Signals, Resource, Angular Material, PrimeNG); Styling (Tailwind CSS, Bootstrap, SCSS); Others (Server-Sent Events, Microfrontend Web Components)

API/Backend: Python (Django, FastAPI), Java (Spring Boot, Jakarta Servlets), Vanilla PHP, Node.js (Express.js), JWT & OAuth, SSE Text-Event Stream, WebSockets

Databases: PostgreSQL, Convex, Appwrite, AstraDB, SQLite, JSON, CSV, XML

Cloud Services: AWS (EC2, LightSail, S3/Minio, SES, Route 53, Bedrock, Strands Agents SDK), Netlify, Cloudflare Tunnel, Tailscale, Dokploy.

Dev Tools: VS Code, Claude Code, OpenCode, Git, GitHub Actions, Docker Compose, Dockerfile, Apache, Caddy, Nginx, DBeaver, Postman, cURL

PROJECTS

- **Catalogd** [↗](#)
 - Developed a full-stack social cataloging platform for the video game community, enabling users to organize, review, and discover titles.
 - Implemented secure authentication with Appwrite Discord OAuth, integrated real-time data from a public API called RAWG, and designed responsive interfaces using Tailwind CSS.
 - Leveraged Appwrite as the collections database and implemented CRUD features such as cataloging, reviews, and public chat.
- **AI Game Recommender** [↗](#)
 - Built an AI-powered game recommender web application using Next.js and AstraDB SDK, utilizing OpenAI text-embed model to calculate vector embeddings to deliver functional recommendations and semantic similarity search from a dataset of 20,000+ video game titles.
- **Country Economic Indicator Analytics Dashboard** [↗](#)
 - Built a full-stack analytics dashboard (Java Spring Boot, React.js, MySQL) to visualize and compare key economic indicators across countries.
 - Designed interactive data visualizations for GDP, population, education, inflation, and labor statistics, enabling users to gain actionable insights from global datasets.
- **To-Do List** [↗](#)
 - Engineered a full-stack to-do list application bridging modern Angular frontend with a simulated legacy COBOL backend via Node.js and Express.js middleware.
 - Automated deployment and environment simulation using Docker Compose, demonstrating proficiency in containerization and legacy system integration.
- **Java Jakarta Servlet Starter Web App** [↗](#)
 - Created a comprehensive Java web application for managing member records with full CRUD functionality.
 - Demonstrated the implementation of MVC architecture using Jakarta Servlets for REST API with JSON; JWT and Email service with Maven dependencies, Angular 19 for modern user interface, and MySQL database all containerised inside of Docker Compose.
- **PHP Starter Web App** [↗](#)
 - Developed and containerized multiple PHP web applications (vehicle rental management, movies/cars database, calculators) using Docker Compose for streamlined development and deployment.
 - Enhanced web development skills by integrating PHP, Apache, MySQL, and Tailwind CSS, focusing on modular design and maintainability.
- **RAWG to VectorDB** [↗](#)
 - Designed and implemented Python script pipeline to fetch video game data from the RAWG API; clean, filter, and store in an SQLite database, generate OpenAI vector embeddings, and ingest the results into a vector-enabled AstraDB collection, successfully processing 20,000+ rows of video game data for semantic search.

CERTIFICATES

- **AWS Certified Solutions Architect - Associate** [↗](#) — *Amazon Web Services (AWS)*
 - Gained comprehensive understanding of AWS services and technologies. Demonstrated the ability to build secure and robust solutions using architectural design principles based on customer requirements
- **Build REST APIs with Django REST Framework and Python** [↗](#) — *Udemy*
 - Learned how to build robust REST APIs in Django using Django REST Framework dependency.
- **Go: The Complete Developer's Guide (Golang)** [↗](#) — *Udemy*
 - Learned the fundamentals of Golang and its type-safe syntax.
- **Google IT Automation with Python Specialization** [↗](#) — *Coursera*
 - Utilized Python scripting to automate tasks and manage IT resources across physical & cloud-based VMs.
- **Google UX Design Specialization** [↗](#) — *Coursera*
 - Conducted UX research and applied user-centered design principles.
- **Malaysian University English Test (MUET)** — *Majlis Peperiksaan Malaysia (MPM)*
 - Band Achieved: 4.5

SPOKEN/WRITTEN LANGUAGES

- Bahasa Melayu - Native proficiency
- English - Professional and conversational proficiency
